Theophylline Test Kit.

A better answer, STAT.

If you're monitoring theophylline, Beckman has a better answer. Our new theophylline test kit, combined with the ICS™ Drug System. The field-proven rate methodology of the ICS provides an answer in less than 60 seconds, 24 hours a day. Such STAT capability can be a real life-saver. Literally.

The ICS is not only fast, it's easy to use. The single-point calibration saves valuable tech time. And the visually displayed answer is final, requiring no data reduction.

Plus, you are assured reliability. Besides being stable for 18 months, the reagents are specifically manufactured to be used with the ICS, guaranteeing final answer dependability.

For further information on the rapidly growing line of ICS drug kits, contact your local Beckman representative. Or write: Clinical Instruments Division, Beckman Instruments, Inc., 200 S. Kraemer Blvd., Brea, CA 92621.

Phenytoin & Phenobarbital Test Kits:

Better answers, dramatic savings.

If you're monitoring phenytoin or phenobarbital, Beckman has a better answer. Our new drug test kits, combined with the ICS™ Drug System. The exclusive rate methodology of the ICS provides quantitation of these drugs in less than 60 seconds, giving you true STAT capability, 24 hours a day. And at a cost far less than competitive systems.

Single point calibration provides a *final answer* visually displayed in μg/mL. So there's no need for calculations.

Reagents are liquid, requiring no rehydration or equilibration. Superior precision is assured because the reagents are specifically made to be used with the field-proven ICS.

For more information on the rapidly growing line of ICS drug kits, contact your local Beckman representative. Or write: Clinical Instruments Division, Beckman Instruments, Inc., 200 S. Kraemer Blvd., Brea, CA 92621.
